## Part 2: Names and Formulas for Ionic Compounds

- A formula unit represents the simplest ratio of the ions involved. Steps of naming ionic compounds

- Chemical nomenclature is a systematic way of naming compounds.
- Name the cation followed by the anion.
- For monatomic cations use the element name.
- For monatomic anions, use the root element name and the suffix -ide.
- To distinguish between different oxidation states of the same element,
- the oxidation state is written in parentheses after the name of the cation. - When the compound contains a polyatomic ion, name the cation followed by the name of the polyatomic ion.

Symbol	Name		Symbol	
H +	Hydrogen ion		F 1	Flue
Li +	Lithium ion		C1 -	Chl
Na+	Sodium ion			
K +	Potassium ion		Br -	Bros
Rb +	Rubidium ion		I *	Iodi
Cs+	Cesium ion		O <sup>2-</sup>	Oxi
Be <sup>2+</sup>	Beryllium ion		S 2-	Sulf
Mg <sup>2+</sup>	Magnesium ion		N <sup>3-</sup>	Nitr
Ca 2+	Calcium ion		P 3-	Pho
Ba <sup>2+</sup>	Barium ion	יו	-	THO
A1 3+	Aluminium ion			

F *         Fluoride           C1 *         Chloride           Br *         Bromide           I *         Iodide           O 2*         Oxide	Symbol
Br Bromide I Iodide O 2- Oxide	F 1
I - Iodide O <sup>2</sup> - Oxide	C1 -
O <sup>2-</sup> Oxide	Br -
O ONDE	I -
S 2- Sulfide	S 2-
N <sup>3-</sup> Nitride	N 3-
P 3- Phosphide	P <sup>3-</sup>

 $Fe_2O_3 = iron(III)$  oxide

Common Polyatomic Ions Ion Name Ion Name NH4<sup>+</sup> CO3 2-Ammonium Carbonate Nitrite HCO<sub>3</sub> NO<sub>2</sub>-Bicarbonate Hypochlorite NO<sub>3</sub> Nitrate C10 SO3 Sulfite C1O<sub>2</sub> Chlorite SO42 Sulfate C1O3 Chlorate C1O4 HSO4 Bisulfate Perchlorate OH -C2H3O2 Acetate Hydroxide CN-Cyanide MnO4 Permanganate PO43-Phosphate Cr2O72-Dichromate HPO4 2-Hydrogen phosphate CrO4 2-Chromate Dihydrogen phosphate O22-Peroxide H<sub>2</sub>PO<sub>4</sub><sup>-</sup>

 $Na_{PO_{1}} = sodium phosphate$ 

Symbol	Systematic name (Stock system)	Classical name	Symbol	Systematic name (Stock system)	Classical name
Cu <sup>1+</sup>	Copper (I)	Cuprous	Hg2 <sup>2+</sup>	Mercury (I)	Mercurous
Cu 2+	Copper (II)	Cupric	Hg <sup>2+</sup>	Mercury (II)	Mercuric
Fe <sup>2+</sup>	Iron (II)	Ferrous	Pb <sup>2+</sup>	Lead (II)	Plumbous
Fe <sup>3+</sup>	Iron (III)	Ferric	Pb <sup>4+</sup>	Lead (IV)	plumbic
Sn <sup>2+</sup>	Tin (II)	Stannous	Co <sup>2+</sup>	Cobalt (II)	Cobaltous
Sn <sup>4+</sup>	Tin (IV)	Stannic	Co <sup>4+</sup>	Cobalt (II)	Cobaltic
Cr <sup>2+</sup>	Chromium (II)	Chromous	Au +	Gold (I)	Aurous
Cr 3+	Chromium (III)	Chromic	Au <sup>3+</sup>	Gold (III)	Auric
Mn <sup>2+</sup>	Manganese (II)	Manganous	Ni <sup>2+</sup>	Nickel (II)	Nickelous
Mn <sup>3+</sup>	Manganese (III)	Manganic	Ni <sup>3+</sup>	Nickel (III)	Nickelic

13 CH 6	The name of NaF isANitrogen fluorineBSodium fluorideCNitrogen fluorideDSodium fluorineBy using ions tables, we will find that the first part Na <sup>+</sup> name is Sodium, F <sup>-</sup> the second part name is fluoride $\rightarrow$ B	17 CH 6	A Li <sub>3</sub> C C Li(C	$(O_3)_2$ i ion is Li <sup>+</sup> , ca	B D
14 CH 6	The name of CaCl2 isACarbon chlorideBCalcium bromideCCalcium dichlorideDCalcium chlorideBy using ions tables, we will find that the first part Ca <sup>+2</sup> name is Calcium, Cl <sup>-</sup> the second part name is chloride $\rightarrow$ D	18 CH 6	$\begin{array}{c} \mathbf{A}  \mathrm{Fe}_2 \mathrm{N} \\ \mathbf{C}  \mathrm{Fe} \mathrm{N} \end{array}$	$O_3$ ) is Fe <sup>2+</sup> , Nitra	B D
15 CH 6	The name of MgSO4 isBMagnesium sulfiteCMagnesium sulfateDMagnesium sulfiteBy using ions tables, we will find that the first part Mg <sup>+2</sup> name is Magnesium, SO4 <sup>2-</sup> the second part name issulfate So the name is Magnesium sulfate. $\rightarrow$ C	2 Do It? 3 Do it?	A Dialu C Alum	_	fate <b>B</b> A e <b>D</b> A
16 CH 6	The name of Ca <sub>3</sub> (PO <sub>4</sub> ) <sub>2</sub> isACalcium diphosphateBCalcium phosphiteCDicalcium diphosphateDCalcium phosphateBy using ions tables, we will find that the first part Ca <sup>+2</sup> name is Calcium, PO4 <sup>3-</sup> the second part name is phosphate So the name is Calcium phosphate. $\rightarrow$ D		Chapter 1 A	6: Do It An 2 B	swer key 3 D

17	The formula of Lithium carbonate is		
CH	A Li <sub>3</sub> CO <sub>3</sub> B Li <sub>2</sub> CO	$D_3$	
6	<b>C</b> $\text{Li}(\text{CO}_3)_2$ <b>D</b> $\text{Li}_2(\text{CO}_3)_2$	O <sub>3</sub> ) <sub>3</sub>	
	Lithium ion is Li <sup>+</sup> , carbonate is CO <sub>3</sub> <sup></sup> , so t	he formula	
	is Li <sub>2</sub> CO <sub>3</sub>	→B	

18	The formula of Iron (II) nitrate is			
CH	<b>A</b> $Fe_2NO_3$ <b>B</b> $Fe(NO_3)_2$			
6	<b>C</b> FeNO <sub>3</sub> <b>D</b> $Fe_2(NO_3)_3$			
	Iron (II) is Fe <sup>2+</sup> , Nitrate is NO <sub>3</sub> <sup></sup> , so the formula			
	is $Fe(NO_3)_2 \rightarrow B$			
2	The name of Al <sub>2</sub> (SO <sub>4</sub> ) <sub>3</sub> is			
Do	A Dialuminium sulfate <b>B</b> Aluminium sulfate			
It?	C Aluminium sulfite D Aluminium disulfate			
3	The formula of Chromium (III) chloride is			
	<b>A</b> $CrCl_2$ <b>B</b> $Cr_3Cl_2$			
it?	<b>C</b> CrCl <b>D</b> CrCl <sub>3</sub>
